BLUETOOTH RANGE HELPFUL INFORMATION

1. Weather conditions

Bluetooth range might depend on weather conditions. On a stormy day, waves on the water might temporarily block the Bluetooth signal.

2. Do not submerge the device

The Bluetooth signal can not penetrate water. When using any kind of mounting systems, make sure the device is not submerged.

3. Different obstacles

Please make sure the signal is not being blocked by major obstacles made from steel, reinforced concrete or other heavy material.

4. Bluetooth receiver position

Different smartphones have the Bluetooth receiver in different places. Please check as this will affect the beam direction.

Holding your smartphone

Because of the different Bluetooth beam directions on different smartphone models, the Bluetooth range might vary slightly. Try to find the best option for holding your smartphone or tablet for the best available Bluetooth signal strength.
